

AI-Based Healthcare: Website and App Feedback Form for Entrepreneurs

Aman Chawla

May 7, 2025

Abstract

Rural healthcare can benefit from the use of language models and other AI-assisted technologies. In this note, the authors provide a questionnaire that may be used by entrepreneurs starting out in defining the scope of their AI-based application meant for the healthcare domain.

We aim to create an AI-based healthcare website and app that meets the needs of healthcare professionals. Your input is crucial in shaping this tool. Please share your thoughts and suggestions.

1. What are the key challenges you face in your daily healthcare tasks?
2. In which areas of healthcare do you think AI can have the greatest impact? Diagnostics, Treatment Planning, Medical Research, Administrative Tasks or Patient Education?
3. Which areas of healthcare within diagnostics do you think AI can have the greatest impact? Image Analysis, Medical History Analysis, Disease Detection or Predictive Analysis for Diseases like Diabetes?
4. What specific features would you like to see in an AI-based healthcare website and app?
5. How important is data security and privacy to you when using AI-powered healthcare tools? Not Important or Very Important?
6. Would you be interested in beta testing an AI-based healthcare website and app before its official launch? Yes or No?
7. Are you able or willing to share source datasets like Chest X-rays for initial training and testing? Yes or No? Data security and privacy with international norms is our top priority.
8. Please provide any additional comments or suggestions for our AI-based healthcare website and app.
